

WE'RE TRANSFORMING SECURITY

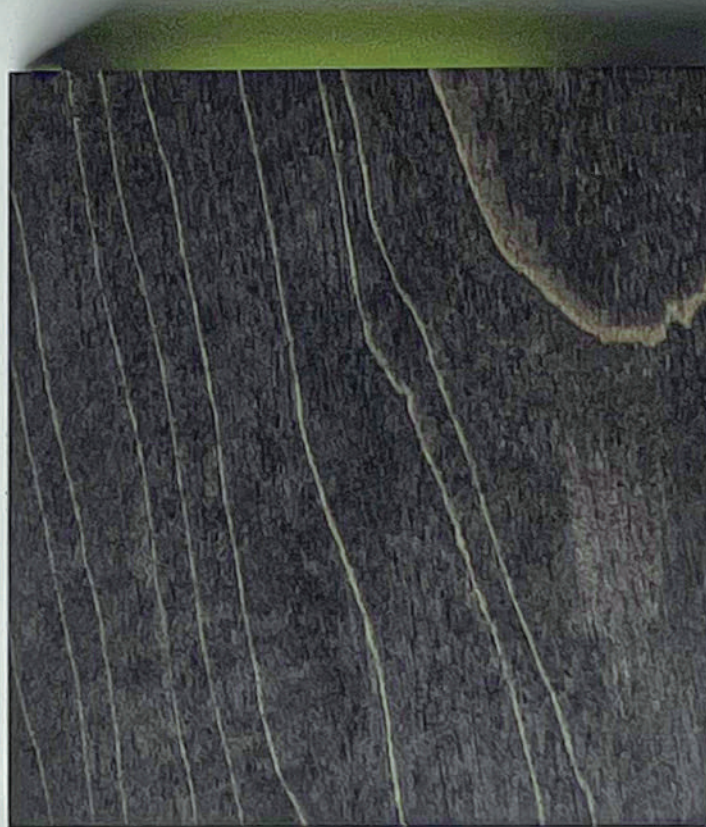

AGRG EYWA BUTTON T

DESIGNER COLLECTION OF BUTTONS

For the Tuya Smart home system
or any Access Control System (ACS)

AGRG EYWA BUTTON T

AGRG EYWA BUTTON T is an electronic device designed for no-touch use (it does not require direct contact with the electrical circuits of the board) and operates at a distance of up to 1/8" (3 mm) from the surface of the device. When using **AGRG EYWA BUTTON T** in Tuya Smart Home system, a number of additional functionalities are available.

AGRG EYWA presents a new collection of buttons made of an array of stabilized fine woods for home, office or country residence (made in Scandinavian, eco or minimalism style).

AGRG EYWA BUTTON T stands for minimalism, clear forms and organic textures of natural wood selected for maximum compatibility with the overall color scheme of the interior. **AGRG EYWA BUTTON T** is a combination of sophisticated aesthetics, modern IT technologies and microelectronics.

AGRG EYWA BUTTON T no-touch buttons are available in natural colors to match interior decor, floor coverings or doors, as well as in attractive contrasting colors, including such bright colors as red or deep blue. All this makes the **AGRG EYWA BUTTON T** a distinctive object d'art on your wall.

The buttons in the **AGRG EYWA BUTTONs T** collection are very thin and they can either fade into your interior without glaring or may become contrasting accents of space, highlighting its style and personality. Thanks to the interior lighting built into the button, designers can not only skillfully accent the texture of the wall decor, but also combine the light schemes of the buttons with other elements of decorative interior lighting.

The innovative **AGRG EYWA MAGNET** magnetic mounting gives designers an additional opportunity to add lighting accents or to direct the LED backlight for public space navigation systems in any desired direction: up, down, left or right.

The standard functions of **AGRG EYWA BUTTON T** in the Smart Home system include:

- Control of any Smart Home elements: lighting, curtains, blinds and other actuators;
- Main switch mode "I'm home / I'm out";
- Support for various Smart Home scenarios.

To connect and use **AGRG EYWA BUTTON T** in the Tuya Smart Home system, all you need is to install the mobile application. You can connect to **AGRG EYWA BUTTON T** from anywhere in the world and receive a push notification on your smartphone.

The no-touch **AGRG EYWA BUTTON T** has a standard option to control various actuators: electromagnetic or electromechanical locks, bells, signal lamps and displays. It can be used to issue control signals as part of an ACS (maximum relay load current 0.15 A), and etc.

The button has a light indicator with smooth switching on and off of RGB-LEDs. The indicators vary by states, modes of operation and device actuation. All operations are accompanied by a sound signal.

The unique devices among others available in the **Tuya Smart** ecosystem are:

- A tamper detection sensor: a built-in infrared tamper detector located under the button cover, which is triggered (the button sends a notification to the mobile application) when an attempt is made to remove the button from the wall;
- An additional wired magnetic contact sensor (reed switch) for accurate detection of a door opening. For example, when a door is opened and then the reed switch is opened (at a distance more than 1 inch (3 cm)), the device transmits an alarm signal to the mobile application.

THE BUTTONS ARE DESIGNED FOR INDOOR INSTALLATION AND CONTINUOUS 24/7 OPERATION

AGRG EYWA BUTTON T basic lines

	CLASSICS	ART
Wood choice	ash, oak	Any possible textures and colors from suggested on the website agrg.design
Price from	\$ 135 / piece	\$ 189 / piece
