

## AGRG® EYWA® BeeSwitch

turn off  
bright lights

close  
the curtains

turn on the  
night light

turn on evening lights

turn off the TV

flowerpots lamps for 3 hours

play relaxing music

1 : 1

Any action is meant to bind a separate device or use absolutely any scene you need. For example, if you place **BeeSwitch** at the front door, it can perform the following functions:

**Single touch:** runs the "Leaving the house" scene – turns off all the lights, closes the curtains, turns on the home security system.

**Double touch:** runs the "Return Home" scene – turns on the light and air conditioner, turns off the security system.

**Long press:** runs flowerpots lamps for 3 hours.

Combine the switch with any type of **Tuya Smart** home devices and come up with new scenes.

The **BeeSwitch** is powered by a battery (CR2450), so no need for an electrical box for installation. All you have to do is to install a mounting plate with two screws (supplied) to the surface where the switch should be.

BeeSwitch supports the original application – Tuya Smart Life

## What's BeeSwitch?

AGRG EYWA **BeeSwitch** is a wireless smart switch designed to control devices and scenarios in Tuya Smart Life home system.

The switch is touch-sensitive. Created in 1 or 2-key option, powered by a CR2450 battery; and a Zigbee gateway is required for operation.

The device is installed with a convenient magnet mount on the wall or any surface of your home or office.

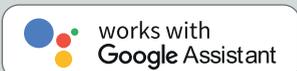

## Where to use?

We suggest using **BeeSwitch** for smart home controls in different facilities:

- ↪ **country houses** (once repair and decoration is completed, no new wires should be added);
- ↪ **offices** (separate control of lighting, curtains, heating, air conditioning and scenes use);
- ↪ **hotels, apartments for rent, beauty services.**

In general no one pays attention to what kind of light bulbs are installed in the house, but **BeeSwitch** will definitely have a proper effect on its inhabitants and guests, emphasizing the unique design of your interior.

AGRG EYWA **BeeSwitch** is the world's first DIY switch with a luxurious design.

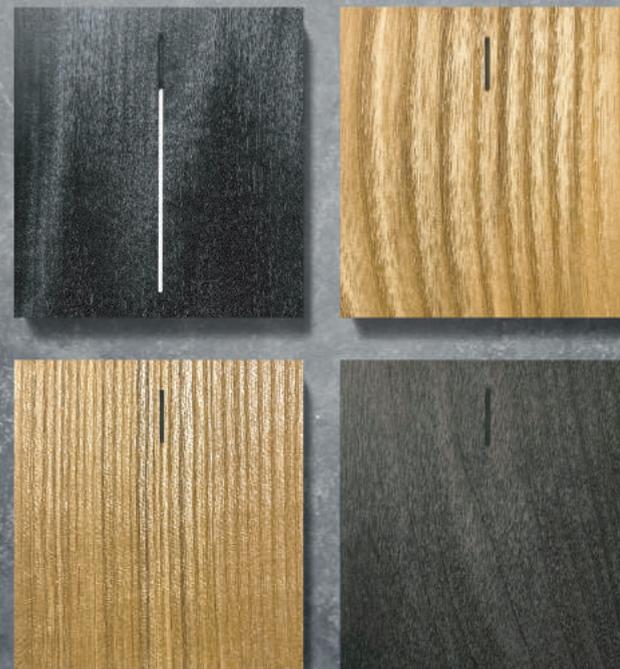

Any action is meant to bind a separate device or use absolutely any scene you need.

All BeeSwitch switches support three different actions per key: **single touch**, **double touch** and **long press**.
